for Legal Institutions

ENSURING FACTUAL ACCURACY
IN LAWMAKING AND POLICY ANALYSIS

babelscape®
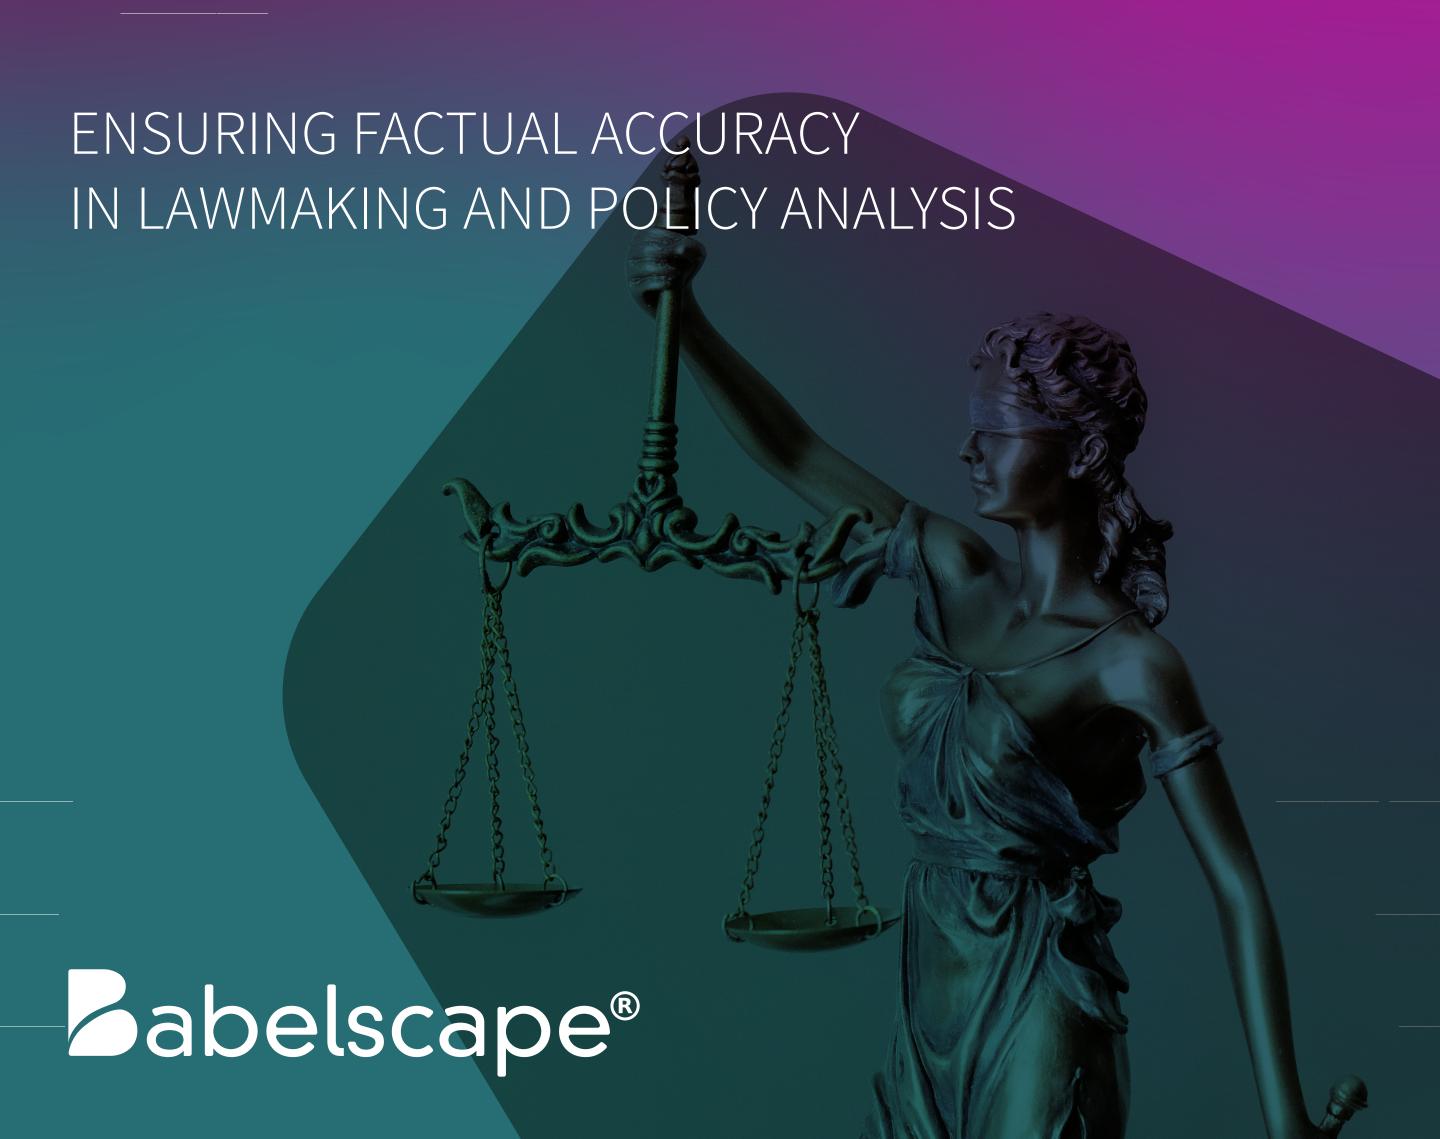

The legal sector's fact burden:

laws, policy proposals, and impact assessments rely on **complex**, **data-rich claims**.

documents must reference **accurate statistics**, international agreements, and **historical data**.

⚠

ual fact-checking is **time-consuming** and r-prone.

atements can lead to **legal disputes**, **public klash**, and **policy inefficacy**.

elscape®

Introducing AI-powered fact-checking:

Vera **analyzes** factual claims **within legal drafts**.

Retrieves **supporting** or **contradicting evidence** from authoritative sources.

Flags uncertain or **controversial statements** early in the process.

Multilingual and adaptable to **national and international contexts**.

Practical application in legal workflow:

In Italy, cigarettes must show warnings like 'Smoking kills' (since 2007) 🔍

The sentence was classified as controversial

The sentence was classified as controversial due to conflicting information regarding the timeline and the source of the regulation for tobacco warning labels in Italy.

While it is true that Italy mandates cigarette packages to display health warnings, including "Smoking kills," this requirement is based on the European Union's Tobacco Products Directive (2001/37/EC), which set the framework for health warnings on tobacco products.

Constitution of the Italian Republic   Tobacco Products Directive (2001/37/EC)

However, the claim that this requirement came into effect in 2007 is incorrect. Italy only fully implemented these regulations with Decree No. 6 of 2016, long after the 2007 date mentioned in the claim.

Decree No. 6 of 2016
